Exercise

1. Create this following directory and subdirectory with one command

```
                    Dos
                     │
                     ▼
                    Com
        ┌────────────┴────────────┐
        ▼                         ▼
      Disk                       Mem
```
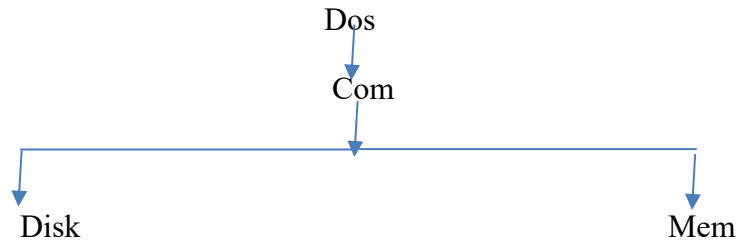

2. Create a file called Fdisk.txt; Sys.txt under Disk and create file called Config.txt and Auto.bat under Mem

3. Move all file under Disk to Com

4. Delete Config.txt

5. Give the permissions to the file Fdisk.txt to owner and execute

6. Create user call John Kinsmo under Mem and assign permission to read and write into the file Auto.bat

7. Create a new directory named "Mega" inside the "projects" directory to store backups of the project files. Copy all files from "project1" to the "Mega" directory. List all files in the "project2" directory along with their permissions, owner, and group. Move the entire "project3" directory to your home directory. Remove the "project1" directory and all its contents.

NB: Don't change directory before performing any task

Provide the commands or command sequences to accomplish each of these tasks.
